LOT 482 - Premium Mineral Collection with Agate, Jasper, Petrified Wood & Amethyst

Description

Extensive collection of natural mineral specimens including jasper, petrified wood, agate, amethyst, and various quartz types. Features both loose specimens and labeled bags, plus a glass display jar with brass lid.

Collection contains approximately 30-40 mineral specimens of varying geological origins. Features a mix of polished and raw stones including several notable specimens: petrified wood sections showing distinct growth rings, red/brown jasper nodules with characteristic banding, agate specimens with visible crystalline chambers, transparent to translucent quartz varieties, and small amethyst fragments displaying purple coloration.

The collection is partially organized in clear plastic specimen bags with some larger examples presented individually. Glass storage jar with brass screw-top lid included for display purposes. Many specimens show natural veining, crystalline formations, and distinctive color patterns characteristic of their mineral type.
